➔ PLUMBING REPAIRS

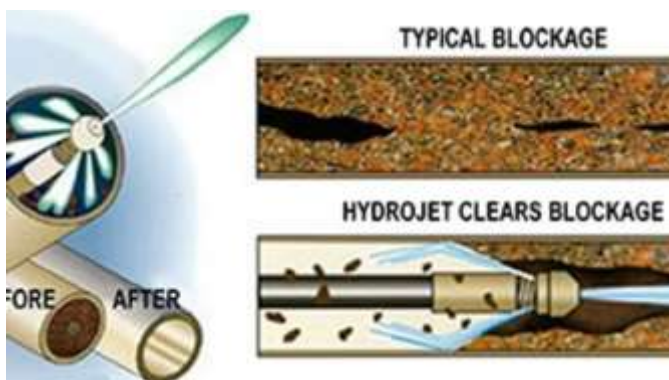

➔ HYDRO JETTING

What is Hydro Jetting?

Hydro Jetting is a non-invasive plumbing solution that clears pipes by removing blockages effectively. It involves the use of high-pressure water jets, which can remove debris, clogs, and build-up from the plumbing system. In the past, rodding was the only solution through which plumbers powered a hole through the accumulation. However, hydro jetting is more prevalent among plumbers now.

Before the process starts, you will need to share your details with a professional company. They will inspect your plumbing system and evaluate the drain issues to understand if hydro jetting is required.

FAT TRAPS AND GREASE SOLUTIONS

WHY CHOOSE THE AVOCA GROUP?

We guarantee to carry out our works and services in an ethical and professional manner at all times.

Avoca is familiar with the unique working environments in the Eastern Cape, thus avoiding long completion times and avoiding unnecessary expenses.

Our service teams are based in strategic areas across the Eastern Cape, therefore we will reduce "Call out fees" and logistical headaches.

We will interact with your store and store managers on a weekly / monthly basis thus ensuring that your stores are well maintained and problem free.
