- Hydrophobic, UV resistant, denim dye colouring resistant, stain resistant & help preserves leather colour

FABRIC

- Applied to all Fabric seats, carpets & fabric interior finishes ie : Alcantara
- Extremely hydrophobic, UV protection, water and stain resistant

WRAPPING & CUSTOM GRAPHICS

Vehicle Wrapping is a process of transforming the color and look of your car by applying large sheets of vinyl film to each individual panel.

Having your car vinyl wrapped will completely change the appearance & visual styling as well as protect your paintwork from stone chips and fading.

The vinyl products we use on the vehicles we wrap are premium, automotive grade vinyl films. This vinyl is specially designed for vehicles using paint-safe adhesive, malleability, and air-release features that make installation on your car as safe as possible. Unlike a re-paint which will ruin the original value of your vehicle, a vinyl wrap will actually protect it and is removable.

PAINT PROTECTION FILM

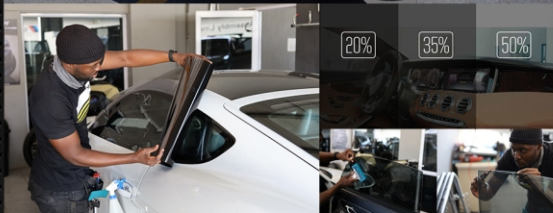

BODYFENCE
PAINT PROTECTION FILM

The BodyFence X range developed by Hexis R&D is a self healing, hydrophobic transparent adhesive film.

This film is at the cutting edge of technology that will protect your vehicle against external aggressions: scratches, stone chips, abrasions. Once fitted it is easy to wash and maintain & will retain a high gloss finish for years to come.

WINDOW & LIGHT TINT

Our Smash and Grab range will increase the comfort of your vehicle by not only providing you safety and security but also heat rejection.

Our Smash and grab film does the following:

- Provides enhanced security
- Resists smash and grab burglaries
- Holds glass together in the event of a break-in or breakage incident
- Blocks heat and reduces hot spots by rejecting up to 97% of the sun's infrared rays
- Abrasion resistant coating to maintain its appearance
- Rejects UV light, reduces fading to fabrics and furnishings

Visual Aesthetic Upgrade - Light Tint

As clear and sleek as new composite headlights are, they're also close to the road—and extremely vulnerable to damage from both debris and the Sun's UV rays.

XPEL Headlamp Protection Film has a proprietary outer skin that is nearly impossible to scuff or scratch, and an inner layer that bonds to lenses and evens out any surface imperfections. It's thick enough to handle direct stone strikes, but still lets headlamp heat dissipate naturally.
